

# Get started with Sumdog

Personalised maths and spelling practice that pupils and teachers love.

Thank you for creating your Sumdog account. We've put together a few simple steps to help you get started

**Check each step off of the list as you go!**

1

## Step 1 - Join your school or set up a new one

- When you first log in you'll be prompted to search for your school to see if there is an existing Sumdog account.
- If your school has an existing account, join it and await approval from one of your colleagues
- If your school doesn't have an existing account, you can set up a new one.

*Tip:* To make sure you are joining the correct school, you should see your colleagues initials underneath the school name

2

## Step 2 - Create your classes

- If you are joining an existing school, your classes may already be set up.
- If not, follow the steps when prompted.

*Tip:* If you have your class lists in a digital format you can just copy and paste your pupils' names in, rather than typing them out.

3

## Step 3 - Print logins and letters

- Once you have set up your classes you will be prompted to print logins for your pupils, and letters for them to take home, so parents and guardians can understand what Sumdog is and how their children can log in.
- You can also find these under 'Settings' and 'Manage students'

*Tip:* your pupils can log in on any internet connected device, so they can practice any time, anywhere.

Once you're set up, you can log into your own Sumdog account to monitor your pupil's activity, and set them tasks to complete when they log in.
